

19. Benchmark

11

With a benchmark you check if you are winning or losing. It usually tracks on a straight line if you are making it or not. The straight line is used as a point of reference, to see how you measure towards it, if your graph reaches or surpasses the line you have beaten the benchmark.

Example: Toyota Material Handling has been the leading in the market widely recognised. We have supplied the largest volume of forklifts and warehouse equipment in the market for decades. We are used as the Benchmark by other companies in the business like Coscor and BMW.

20. Segmentation.

This is a process of dividing datasets into a unique consistent sub-groups based on shared qualities. It allows organizations to tailor messaging, product features and retention strategies to specific behaviors and traits.

Example: In outline of work segmentation would mean dividing our customers into distinct groups based on their specific equipment needs. For Tabelet el shprete they would need electric, narrow aisle reach trucks or pallet jacks. Operating indoors with zero emissions near food. But for ports and farmers they will need heavy duty diesel, that work on rough terrains that work outside. Etc 2,5 ton - 5' or 7 tons.

103 Customer Sales KPIs

12

21. Conversion Rate

It is a percentage of people who react the way you want them to in your sales process. The fact that your business is turning interest into actual action. If people you quote are 100 and 10 of them approve the quotes the conversion rate is 10%.

Example: For a sales rep to convert sales, they go through certain steps of following up on a lead, quote a customer, inspect customer's warehouse floor, door height and load capacity requirements to determine the correct spec of a unit to sell. 40 site audits vs 100 quotes equates to 40% conversion rate.

22. Customer Acquisition Cost (CAC)

It is how much money you have to spend to land one new paying customer. Everything you spent on sales and marketing over a period of time. The amount of new customers you get vs how much you spent will determine loss or profit.

Example: If we suddenly feel that the Rental dept. is low on revenue, and business is low. Then we decide to run specials, ad campaigns, social media posts. The amount of money vs the customers we bring in ~~etc~~ on the promotion will determine if it was worth it or not.

23. Customer Lifetime Value.

13

A total amount of money a customer is expected to spend with your business over their entire relationship with your business.

Example: Netflix runs a subscription service to customers. Customers pay a monthly subscription to watch their services. If they expect a lifespan of a customer to be 24 months, then they cancel in a lesser time it ~~cut~~ cuts the lifespan value.

Source: <https://ibm.com>

24. Churn Rate

It is the percentage of customers or users of your service who stop doing business with a company over a specific period.

Example: The number of Netflix users who decides to cancel their subscription. If you lost 40 customers vs 100 customers who had subscribed to the service you have lost 40% of customers.

Source: <https://www.investopedia.com>

25. Customer Retention Rate > is the percentage of customers who remain loyal and continue to do business with you over a long period.

Example: The amount of customers that remained loyal when everyone leaves, ie DSTV lost a huge chunk of customers when Netflix and other streaming service came, but others remained loyal for reasons known to them. That percentage is retention rate.

26.

(NPS) Net Promoter Score

114

Simple index ranging from -100 to $+100$ that measures customer loyalty and overall satisfaction. On a scale of 0 to 10 how likely are you to recommend our business to a friend.

Example: When a business conducts surveys at the end with questionnaires to determine how likely they would recommend that particular company. Source: This also lets you into an understanding on what you can improve and what is going wrong with your business

Source: <https://www.ibm.com>

27. Average Order Value. (AOV)

Tracks how much revenue you pull per transaction average and amount spent everytime a customer places an order. Directly impacts customer lifetime and overall profitability.

Example: If an online store makes RSD. 000 sales over 1000 individual orders in a month, means AOV is RSD per order.

28.

SALES Funnel → a journey that a customer takes step by step from the time they learn ^{about} ~~from~~ the business till the customer makes a purchase. Because it begins as a large group of people potential buyers at the top, some drop off leaving a more serious group that actually buys.

Example: A Nail technician advertises about their business, client clicks on the link to view prices and services, Client books appointment online then reminded, sale is confirmed. Some don't go past the viewing prices and catalog. They don't continue to book and confirm sales.

04 Marketing & Campaign Analytics

29. Marketing Campaign.

A set of calculated activities that promote your business's goal. They are used to promote a product or service or the whole company brand. The business can choose to use different platforms for promotion like print media, online ads, emails & demos.

Example: @ Toyota forklift our sales reps will have a demo unit at a certain customers site if they have quoted the customer, more especially on a new customer if ~~you~~^{they} want to convince the customer to now start using our brand. They will leave a demo onsite so that the customer can feel how efficient our units are, fuel consumption and lasting battery life.

30. Post-Campaign Analysis

It is when you look back at a finished PR Campaign and judge how well it worked. You compare the campaigns actual results with the goals you set at the start, then see if worked or not.

Example: If the analysis post campaign signals that advertising targeted at audiences over 40 years old was less effective than expected, this will only mean changes need to be made on the strategy. Relocating the budget to focus on younger age group might help.

31. Incremental value

Its when we figure out the additional impact of a business activity we did on top of what could have happened without the thing we did.

Example: If I send a quotation for a rental, the customer then says they will think about it. If I give a customer a call a day later, then they approve the call that I made gave the incremental value to have the approval, perhaps the customer would have gone to the competitor if they didn't get my call.

32. Return on Investment (ROI)

It measures the amount of money and profit made on a specific campaign compared to the money spent for the actual campaign.

Example: If I buy wigs at ₹6000, cut them, glue them make them extra pretty and sell all of them for ₹10000, minus the ₹1500 of maintenance. The return on investment is the left over amount that is left after all the costs have been subtracted.

Source: Oracle.com

33. Return on Ad Spend (ROAS)

It measures the revenue the business makes for every rand unit they spend on advertising. It checks the campaign's efficiency by comparing spend

Example: If I spend 1000 on an ad for a forklift Rental the ad brings 3 positive enquiries that result in units become rented for 10 days resulting in ₹8000

$$ROAS = \frac{₹8000}{1000} = 8 \quad \text{ROAS is } 8:1$$

Source: www.bigcommerce.com

34. Click-Through Rate (CTR)

The amount of people who click on your online advertisement calculating in percentage, the more people click and view the ad shows it has captured their attention.

Example: If 600 people click on the ad, dividing by total impressions and multiply by 100 that will give the percentage of the click through rate to show how successful it was.
